SUMMARY

Full-stack developer building REST APIs with Spring Boot, React front ends, and PostgreSQL-backed data models. Shipped a resume-screening platform with weighted candidate scoring and an 86+ test automated suite, and a job-aggregation pipeline unifying three external APIs with cross-source deduplication and rate-limit handling. Comfortable end-to-end: Java/Spring on the backend, React/JS on the front, SQL underneath.

EDUCATION

VIT-AP University <i>B.Tech in Computer Science and Engineering (Core), CGPA: 8.05/10</i>	2023 – 2027 Amaravati, India
Kendriya Vidyalaya Jhalawar <i>Class XII (CBSE), Percentage: 79.3%</i>	2022 Jhalawar, India
Kendriya Vidyalaya Jhalawar <i>Class X (CBSE), Percentage: 86%</i>	2020 Jhalawar, India

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL, HTML5, CSS3
Backend: Java 21, Spring Boot, Spring Security, REST APIs, JWT, JPA/Hibernate
Frontend: React.js, Vite, HTML5, CSS3
Databases: PostgreSQL, SQL, Flyway
APIs & Integration: REST, OpenAPI, third-party API integration (IndianAPI, Jooble, Adzuna)
DevOps & Testing: Docker, Git, GitHub Actions (CI/CD), Maven, Postman, unit & end-to-end testing

PROJECTS

Smart Resume Screener 🔄	Full-Stack
- Engineered a full-stack candidate screening platform that parses PDF, DOCX and TXT resumes and scores candidates against job descriptions using deterministic keyword matching combined with semantic analysis via Google Gemini and OpenAI APIs. - Designed a weighted scoring model spanning skills, semantic relevance, work experience and education, supporting concurrent multi-candidate screening and bulk database writes. - Secured REST endpoints with API-key authentication and rate limiting; built an automated 86+ unit and end-to-end test suite and optimized deterministic job creation to 12ms.	
DOT Field 🔄	Full-Stack / Job Discovery
- Built an India-first job discovery platform aggregating listings from three external sources (IndianAPI, Jooble, Adzuna) through a multi-source ingestion pipeline with cross-source deduplication. - Implemented authentication and authorization using Spring Security, BCrypt, JWT and role-based access control, backed by a PostgreSQL persistence layer via JPA/Hibernate and Flyway migrations. - Built resilient API integrations handling rate limiting, HTTP 429 responses and provider failures; containerized the backend with a multi-stage Docker build and CI via GitHub Actions.	

ACHIEVEMENTS

- * Solved **200+ Data Structures and Algorithms problems** across platforms including **LeetCode and GeeksforGeeks**, covering Arrays, Strings, Linked Lists, Stacks, Queues, Trees, Graphs, Recursion, Backtracking, Sorting, and Searching.
